

CASH VALVE BACK PRESSURE VALVES

K SERIES

High capacity angle bypass regulators or back pressure control valves with models for pressures to 1500 psig (103.4 barg) and capacities to 200 gallons per minute (757 l/min.)

GENERAL APPLICATION

Models are available for use on pump systems with water and other fluids, especially oil of all grades; hydraulic systems, oil burning equipment, rams, presses and lifts, chemicals processes, waste treatment, desalination and car washes.

TECHNICAL DATA

Max. temperature:

Materials: Bronze, brass
Sizes: ¼" to 2" (7 to 50 mm)
Connections: Threaded NPTF
Pressure range: 5 to 1500 psig
(0.3 to 103.4 barg)

450°F (232°C)

FEATURES

- Rugged, simple design enables complete disassembly on-line for easy maintenance and repair.
- Smooth, quiet performance.
- Fitted with female threaded connections, bottom inlet, side outlet; valves may be operated in any position.
- Closing cap over the top adjusting screw discourages unauthorized tampering with the set pressure and seals against leakage.
- Can be used to maintain a constant pressure differential.
- Type K-5C fitted with a silicone rubber seat disc to provide tight shut-off.
- Type K-10 balanced piston design is substantially unaffected by pressures or pressure changes in the outlet lines, assuring constant control over pump discharge pressure.
- K-10/K-15 feature a long pressure spring to provide maximum sensitivity.
- K-15 has a replaceable stainless steel seat and piston providing longer valve life at minimal cost.

MODELS OVERVIEW

K Series valves are high capacity angle bypass regulators or back pressure control valves with a bottom inlet and side outlet. System pressure to be regulated is connected to the bottom inlet. Excess flow that is to be returned to the tank, pump suction or simply piped to a drain is connected to the side outlet.

There is a choice of four models suitable for specific duties: Types K-5 and K-5C are available in 1", $1\frac{1}{4}$ ", $1\frac{1}{4}$ " and 2" [25, 32.5, 38 and 50 mm] sizes and designed for systems with a maximum operating temperature of 300°F (150°C) that require pressure control from 5 to 150 psig (0.3 to 10.3 barg).

Type K-5C differs from Type K-5 as it is fitted with a silicone rubber seat disc rather than a metal seat to provide for applications where tight shut-off is required.

They are suitable for pump systems of all kinds, applicable on water, other fluids and especially oils of all grades.

Type K-10 valves are totally enclosed and physically small with a balanced piston design. They are available in $\frac{1}{4}$ ", $\frac{3}{6}$ ", $\frac{1}{2}$ ", $\frac{3}{4}$ ", 1" and $\frac{1}{4}$ " sizes and are designed for systems which require pressure control from 15 to 600 psig (1.0 to 41.4 barg). Maximum system temperature is 450°F (232°C).

They are suitable for water, other liquids and light fuel oils and are especially well suited for use on hydraulic systems of all kinds, such as pumping units on a machine tool hydraulic mechanism and for any system requiring automatic regulation of a pump discharge pressure.

The Type K-15 is a small, compact piston-type back pressure valve available in 1/4", 1/4" and 1/4" sizes and is designed for systems which require pressure control from 25 to 1500 psig (1.7 to 103.4 barg) with maximum temperatures of 450°F (232°C).

It is suitable for water or other liquids and light fuel oil and is especially suited for bypass applications on high pressure pumps or any system requiring automatic regulation of a pump discharge pressure.

^{*} Set pressures are based upon valve discharge into an atmospheric pressure return line.

If return line pressure is significantly higher than atmospheric pressure, then consult factory for capacity information.

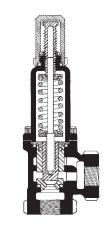

TYPE K-10 PISTON-TYPE ANGLE BACK PRESSURE VALVE

Construction/specifications

The Type K-10 valve incorporates a brass closing cap, a stainless steel pressure spring, a heavy bronze body, stainless steel trim and single seat.
