5840

Two-Way Single Seat Unbalanced Valve with Cage-Retained Seat

Description

Warren Controls Series 5800 Compact Globe Control Valves feature rugged high efficiency bodies of steel or stainless steel, with cage-retained seats for ease of maintenance, and a variety of trim materials and port sizes. The equal percentage, linear and modified linear plugs provide excellent modulating control of a wide variety of fluids. The Series 5800 is ideally suited where value and long life are important objectives for applications including but not limited to the Chemical, Food & Beverage, General Service, Marine, Pulp & Paper, Refining, District Energy and Pharmaceutical Industries with temperatures from -20 to 800°F, severe service, dirty fluids (5840 only), high pressure drops, and corrosive fluids.

5843

Two-Way Single Seat Cage Balanced Valve with Cage-Retained Seat

5848

**Low Flow Trim
Choices Available
Include 316SS,
PEEK and PTFE**

TABLE OF CONTENTS

Features and Advantages	5
Body Style Versus Application	6-7
Body Pressure-Temperature Rating	7
Flowing Differential Pressure Limits	7
Allowable Seat Leakage	7
Attribute Selection Criteria	8-9
Construction Details	10-21
Flow Coefficients (Cv) Versus Travel	22-23
Sizing Reference and Load Sizing Calculations	24
Shut-Off ΔP Ratings	25-27
Heat/Sound Pressure Levels Guidelines	28-31
Dimensions and Weights	32-33
Actuators, Positioners, and Accessories	34-39
Configurations	40-42
Fluid Temperature Limits	41
Factory Default Settings	43

RUGGEDNESS AND HIGH PERFORMANCE

Features	Advantages
Compact rugged valve body	Reduces envelope size and weight without sacrificing pressure boundary integrity or high Cv's.
Precision manufactured valve components	Valve bodies machined in single operation in 4 axis computer numerical controlled horizontal machining centers. Bodies and trim components held to exacting geometric tolerances ensuring smooth reliable operation of finished valve.
Body materials	Standard body materials are WCB steel and CF8M stainless steel. Bodies available custom cast in other specialized alloys.
Trim components	Durable rugged plug and seat construction shuts off tightly.
Equal % or Linear plug	Provides exceptional modulating control with 50:1 rangeability.
Modified Linear plug	Provides exceptional modulating control with up to 40:1 rangeability.
Reduced ports	Match valve size to line size and capacity to flow requirements. Maximizes performance. Prevents oversized valves. Simplifies piping. Reduces need for reducers or expanders. 1, 2, & 3 sizes reduced trim available.
Trim materials	Alloy 6 wrapped stainless steel trim promotes long dependable service life in applications controlling hard to handle fluids. 316 & 400 stainless steel trim, PEEK & TFE soft seat trim available for ANSI Class VI shut-off in non-corrosive non-erosive service.
Oversized bearings and shafts	Ideal for high pressure drops.
Valve stem to plug connection	Rigid connection provides zero backlash. Assures minimum dead band and hysteresis.
Threaded valve stem connection and split stem connector	Solid actuator interface. Provides zero backlash. Assures minimum dead band and hysteresis.
Factory lubricated packing and valve stem	Minimizes hysteresis from packing friction.
Extension bonnet	Allows for wide range of temperature applications.

INCREASED SERVICEABILITY AND REDUCED MAINTENANCE

Features	Advantages
Integral valve body flanges	Promote secure valve installations and piping integrity. Easy installation. Eliminate exposed line flange bolting. Shorten alignment and installation time. Many different classes of pipe flanges.
ANSI Standard valve body face to face dimensions and bolt patterns	Simplifies piping designs and layouts for new installations. Minimizes need to change piping in existing installations.
Easy actuator and accessory mounting	Facilitates removal and installation for service and maintenance.
Roller burnished valve stem	Ultra smooth finish minimizes packing wear and maximizes life. Smooth function and minimum stick/slip.
Bonnet and packing nut bearings and stem wiper	Prevent external particles from infiltrating and damaging packing.
Bolted bonnet and cage retained seat	Provides fast easy access to trim. Speeds inspection and maintenance.

ESTABLISHED FEATURES & QUALITY

Features	Advantages
Linear Control Valve	Combines reciprocating globe valve ruggedness with linear actuators to produce heavy duty automatic throttling control valve which dependably controls fluids in process industries.
Quality valve design & engineering	Components and materials designed and selected to meet or exceed demanding applications, specifications, functional and chemical and temperature compatibility requirements. Product quality built on tried and tested designs and engineering.
Pneumatic diaphragm actuators	Powerful direct or reverse acting spring and diaphragm actuators. Top mounted handwheels available for manual override. Supply pressures to 40 PSIG. Combine actuators with pneumatic accessories to allow for wide variety of control actions.
Pneumatic cylinder actuators	Powerful direct or reverse acting spring and piston actuators. Supply pressures to 120 PSIG. Combine actuators with pneumatic accessories to allow for wide variety of control actions.
Wide variety of accessories	Pneumatic and electro-pneumatic positioners for intrinsically safe, explosion proof, or fail freeze operation. Hart, Profibus PA, and foundation fieldbus inputs available. Position indication switches, I/P's, air filter regulators, and solenoids also available.
Factory testing and set-up	Each control valve undergoes careful set-up and thorough testing by our highly skilled and experienced factory assembly personnel to ensure it is pre-set for its specified service.

2-WAY VALVES

(Control Of Liquids, Gases, And Steam)

5840 2-Way Single Seat Unbalanced Valve with Cage Retained Seat

The 5840 Valve is particularly effective for the control of liquids, gases, and steam. It is a suitable solution for applications with dirty fluids and high pressure drops. ANSI Class IV and VI leakage ratings standard. Available with Warren Class IV+ leakage rating for less leakage than ANSI Class IV (See Allowable Seat Leakage Class table on page 7).

See Table on page 41 for Fluid Temperature Limits

Sizes:	1/2, 3/4, 1, 1-1/2, 2, 2-1/2, 3, 4 inch
Body:	WCB Steel or CF8M Stainless Steel 300 NPT or 300 Socketweld (1/2 thru 2), 150LB Flange or 300LB Flange (1/2 thru 4)
Trim:	EQ% or Linear: 316 Stainless Steel, Alloy 6 Wrapped 316 SS, 400 Stainless Steel, or Alloy 6 Wrapped 400 SS; TFE or PEEK
Leakage Ratings:	ANSI Class IV (Stainless Steel and Alloy 6 Trim), Warren Class IV+ (Stainless Steel and Alloy 6 Trim, SPECIAL ORDER - Consult Factory) ANSI Class VI (TFE and PEEK Trim)
Packing, Type & Bonnet Construction:	LS EPDM Lip w/ PEEK Bearings L8 EPDM Lip w/ Z PEEK Bearings TS TFE V-Ring, Spring Loaded, w/ PEEK Bearings T8 TFE V-Ring, Spring Loaded, w/ Z PEEK Bearings GS Adjustable Graphite w/ PEEK Bearings G8 Adjustable Graphite w/ Z PEEK Bearings GG Adjustable Graphite w/ Graphite Gaskets, Copper Based Graphalloy Bearings & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Hot Water & Steam) GL Adjustable Graphite w/ Graphite Gaskets, Nickel Based Graphalloy Bearings & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Heat Transfer Oils) G7 Adjustable Graphite w/ Graphite Gaskets, Oxidation Resistant Graphalloy Bearings & Extension Bonnet (For Oxidizing Media ONLY) Note: PEEK Bearings are best suited for water and chemical applications. Z-PEEK Bearings are best suited for steam applications.
Rangeability:	50:1

Flow direction is reversed when used with Cylinder
Actuator Failed Closed

5843 2-Way Single Seat Caged Balanced Valve with Cage Retained Seat

The 5843 is a balanced valve that is an effective solution for the control of liquids, gases, and steam at higher pressures. It requires less force to operate than unbalanced valves so smaller actuators can be used. Its single seat O-ring seal design facilitates ANSI Class IV leakage rating standard. It is limited to cleaner fluids. Available with Warren Class IV+ leakage rating for less leakage than ANSI Class IV. (See Allowable Seat Leakage Classes table on page 7).

See Table on page 41 for Fluid Temperature Limits

Sizes:	2-1/2, 3, 4 inch
Body:	WCB Steel, CF8M Stainless Steel 150LB Flange or 300LB Flange
Trim:	EQ% or Linear: 316 Stainless Steel, 400 Stainless Steel, or Alloy 6 Wrapped 400 SS
Leakage Ratings:	ANSI Class IV (Fluoraz Seal) ANSI Class III (Metal Seal, SPECIAL ORDER - Consult Factory) Warren Class IV+ (Fluoraz Seal, SPECIAL ORDER - Consult Factory)
Packing Type & Bonnet Construction:	LS EPDM Lip w/ PEEK Bearings and Fluoraz Seal L8 EPDM Lip w/ Z PEEK Bearings and Fluoraz Seal TS TFE V-Ring, Spring Loaded, w/ PEEK Bearings and Fluoraz Seal T8 TFE V-Ring, Spring Loaded, w/ Z PEEK Bearings and Fluoraz Seal GS Adjustable Graphite w/ PEEK Bearings and Fluoraz Seal G8 Adjustable Graphite w/ Z PEEK Bearings and Fluoraz Seal GG (Special Order) Adjustable Graphite w/ Graphite Gaskets, Copper Based Graphalloy Bearings, Metal Seal, & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Hot Water and Steam - Consult Factory) GL (Special Order) Adjustable Graphite w/ Graphite Gaskets, Nickel Based Graphalloy Bearings, Metal Seal, & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Heat Transfer Oils - Consult Factory) G7 (Special Order) Adjustable Graphite w/ Graphite Gaskets, Oxidation Resistant Graphalloy Bearings, Metal Seal, & Extension Bonnet (For Oxidizing Media ONLY - Consult Factory) Note: PEEK Bearings are best suited for water and chemical applications. Z-PEEK Bearings are best suited for steam applications.
Rangeability:	50:1

Note: Fluoraz Seal in Type 5843 is not compatible with the following solvents: acetates, acetone, benzene, carbon tetrachloride, ethers, Freons, ketones, lacquers, methyl ethyl ketone, and toluene - Consult Factory with service conditions for alternate seal selection.

2-WAY VALVES

[Control of Liquids, Gases, and Steam]

5848 2-Way Single Seat Low-Flow Unbalanced Valve with Cage Retained Seat

The 5848 Valve is particularly effective for the control of clean, very low flow liquids, gases, and steam. ANSI Class IV and VI leakage ratings standard.

See Table on page 41 for Fluid Temperature Limits

Sizes:	1/2, 3/4, 1 inch
Body:	WCB Steel or CF8M Stainless Steel 300 NPT, 300 Socketweld, 150LB Flange or 300LB Flange
Trim:	Modified Linear: 316 Stainless Steel; TFE or PEEK
Leakage Rating:	ANSI Class IV (Stainless Steel Trim), ANSI Class VI (TFE and PEEK Trim)
Packing, Type & Bonnet Construction:	LS EPDM Lip w/ PEEK Bearings L8 EPDM Lip w/ Z PEEK Bearings TS TFE V-Ring, Spring Loaded, w/ PEEK Bearings T8 TFE V-Ring, Spring Loaded, w/ Z PEEK Bearings GS Adjustable Graphite w/ PEEK Bearings G8 Adjustable Graphite w/ Z PEEK Bearings GG Adjustable Graphite w/ Graphite Gaskets, Copper Based Graphalloy Bearings & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Hot Water and Steam) GL Adjustable Graphite w/ Graphite Gaskets, Nickel Based Graphalloy Bearings & Extension Bonnet (For NON-Oxidizing Media ONLY, Best Suited for Heat Transfer Oils) G7 Adjustable Graphite w/ Graphite Gaskets, Oxidation Resistant Graphalloy Bearings & Extension Bonnet (For Oxidizing Media ONLY) Note: PEEK Bearings are best suited for water and chemical applications. Z-PEEK Bearings are best suited for steam applications.
Rangeability:	40:1 for Cv 0.75 30:1 for Cv 0.50 20:1 for Cv 0.25

Flow direction is reversed when used with Cylinder Actuator Failed Closed

BODY PRESSURE-TEMPERATURE RATINGS:

Temperature (F)	150 FLG Steel	300 NPT, SWE, or FLG Steel	150 FLG St Steel	300 NPT, SWE, or FLG St Steel
-20° To 100°F	285	740	275	720
150°	272	710	255	670
175°	266	695	245	645
200°	260	680	235	620
225°	252	673	230	605
250°	245	667	225	590
275°	237	661	220	575
300°	230	655	215	560
325°	222	650	210	548
350°	215	645	205	537
375°	207	640	200	526
400°	200	635	195	515
450°	185	620	182	497
500°	170	605	170	480
550°	155	587	155	465
600°	140	570	140	450
650°	125	550	125	440
700°	110	530	110	435
750°	95	505	95	425
800°	80	410	80	420

Pressure ratings are PSIG

For applications below 32° consult factory

Body Pressure - Temperature Ratings conform to ANSI based on body flange rating and body material. As the fluid temperature increases, the maximum allowable internal pressure decreases. Verify maximum pressures and temperatures prior to selecting body material and body/flange rating.

TRIM MATERIALS	FLOWING DIFFERENTIAL PRESSURE LIMIT
316 Stainless Steel	100 PSID
TFE	15 PSID
PEEK	100 PSID
400 Stainless Steel	200 PSID
Alloy 6	300 PSID

NOTE: Approaching limits for continuous use will reduce trim life. For continuous use, stay within half of rated maximum.

NOTE ON BEARINGS: PEEK or Z PEEK Bearings should not be used for temperatures above 450°F or flowing differential pressure above 300 PSIG.

ALLOWABLE SEAT LEAKAGE CLASSES

Leakage Class	Maximum Seat Leakage	Test Fluid	Test Pressure	Relative Seat Tightness
ANSI Class II**	0.5% of rated CV	Water	45 to 60 PSI	1
ANSI Class III	0.1% of rated CV	Water	45 to 60 PSI	5
ANSI Class IV	0.01% of rated CV	Water	45 to 60 PSI	50
Warren Class IV+ (linear)	0.02 ml /min/inch of trim size/ ΔP(PSI)	Water	Max Operating ΔP	6,000
Warren Class IV+ (rotary)**	0.005 ml /min/inch of trim size/ ΔP(PSI)	Water	Max Operating ΔP	30,000
ANSI Class V**	0.0005 ml /min/inch of trim size/ ΔP(PSI)	Water	Max Operating ΔP	300,000
ANSI Class VI	Class VI about 0.9 ml/min *	Air	50 PSI	600,000

ANSI Class V is a standard reserved for metal seated valves. Warren Controls does not offer this class.

ANSI Class VI is reserved for soft seated valves, available with PTFE or PEEK seat inserts on Series 2800, 3800 & 5800 Valves.

**NOT AVAILABLE IN THE 5800 SERIES.

* Leakage rate varies by valve size, Refer to the ANSI/FCI Standard 70.2.

Class IV+ is not an ANSI/FCI Designation, but a proprietary classification invented and used by Warren Controls, achievable with Metal or Ceramic seats. It is available as a SPECIAL ORDER. Consult Factory with fluid, shut-off pressure, and temperature.

Class IV+ requires special factory set up and as such there is an up charge. Contact Warren Controls Sales Department for pricing and ordering instructions.

TRIM STYLE:

EQUAL % VS. LINEAR

Trim style describes how the plug's shape (style) changes a valve's capacity as the plug moves (travels) inside it. With the Equal % Trim Style, the shape of the plug produces an equal percentage change in capacity for each equal incremental change in travel. As a typical case this results in 3% of capacity at 10% of travel, 4.4% of capacity at 20% of travel, 6.7% of capacity at 30% of travel, on up to 100% of capacity at 100% of travel. With the Linear Trim Style, the shape of the plug produces a linear incremental change in capacity for each incremental change in travel. This results in 10% of capacity at 10% of travel, 20% of capacity at 20% of travel, 30% of capacity at 30% of travel, on up to 100% of capacity at 100% of travel. Compared to the Linear Trim Style, the Equal % Trim Style produces smaller capacities for equal travels. This makes the Equal % Trim Style better suited for flows that are a small percentage of its total capacity, which may occur if the valve is not operating near full capacity, or when flows vary widely over time. The Linear Trim Style is better suited for flows that are a larger percentage of its total capacity which may occur if the valve is operating near full capacity and flows are more steady over time.

MODIFIED LINEAR

Trim style describes how the plug's shape (style) changes a valve's capacity as the plug moves (travels) inside it. With the Modified Linear Trim Style, the shape of the plug produces an incremental change in capacity that falls between that of the EQ% and Linear Trim Styles. This results in 5% of capacity at 10% of travel, 11% of capacity at 20% of travel, 17% of capacity at 30% of travel, on up to 100% of capacity at 100% of travel. This makes the Modified Linear Trim Style suitable for flows ranging from a small to large a percentage of its total capacity.

TRIM MATERIAL

316 STAINLESS STEEL

316 stainless steel is our most common and lowest cost trim material choice. 316 stainless steel trim is suitable for flowing differential pressures up to 100 psig, is capable of tight Class IV and Class IV+ leakage ratings, is corrosion resistant to many fluids, but is less erosion resistant than Alloy 6 wrapped trims. It contains nickel and molybdenum, and a greater amount of chromium, making it more corrosion resistant than 400 series stainless steel

TFE SOFT SEAT

TFE is our most common choice for a resilient trim material. TFE soft seat trim is suitable for flowing differential pressures up to 15 PSIG and temperatures to 250°F, is capable of our tightest Class VI leakage rating, is corrosion resistant to many fluids, but is much less erosion resistant than other trim materials. TFE soft seat trim is not recommended for use in valves with socket weld end connections. When the valve is being installed in the piping, the heat generated by the welding process may damage the soft seat. Consult the factory if the application requires a soft seat in a valve with a socket weld end connection.

PEEK SOFT SEAT

PEEK remains harder than TFE at higher temperatures making it our most durable choice for a resilient trim material. PEEK soft seat trim is suitable for flowing differential pressures up to 100 PSIG and temperatures to 450°F, is capable of our tightest Class VI leakage rating, is corrosion resistant to many fluids, but is much less erosion resistant than other trim materials. PEEK soft seat trim is not recommended for use in valves with socket weld end connections. When the valve is being installed in the piping, the heat generated by the welding process may damage the soft seat. Consult the factory if the application requires a soft seat in a valve with a socket weld end connection.

ALLOY 6 WRAPPED 316 STAINLESS STEEL

Alloy 6 wrapped 316 stainless steel is an extremely durable choice for trim material. Alloy 6 wrapped trim is suitable for flowing differential pressures up to 300 psig, is capable of tight Class IV leakage rating. While somewhat corrosion resistant, Alloy 6 wrapped trim is particularly well suited to wear longer in a cavitation prone environment. Alloy 6 wrapped 316 stainless steel is more corrosion resistant, but less erosion resistant, than Alloy 6 wrapped 400 stainless steel trim.

400 STAINLESS STEEL

400 stainless steel is our most durable stainless steel trim material choice. 400 stainless steel trim is suitable for flowing differential pressures up to 200 PSIG, is capable of tight Class IV and Class IV+ leakage ratings, is corrosion resistant to many fluids, but is less erosion resistant than Alloy 6 wrapped trims. 400 stainless steel contains a greater amount of carbon, so it can be heat treated, making it harder and more erosion resistant than 316 stainless steel.

ALLOY 6 WRAPPED 400 STAINLESS STEEL

Alloy 6 wrapped 400 stainless steel is an extremely durable choice for trim material. Alloy 6 wrapped trim is suitable for flowing differential pressures up to 300 PSIG, is capable of tight Class IV and Class IV+ leakage ratings. While somewhat corrosion resistant, Alloy 6 wrapped trim is particularly well suited to wear longer in a cavitation prone environment. Alloy 6 wrapped 400 stainless steel is more erosion resistant, but less corrosion resistant, than alloy 6 wrapped 316 stainless steel trim.

PACKING TYPE:**TEFLON V-RING**

Teflon v-ring packing is the most common choice for steam and most chemical applications. Teflon v-ring packing is good from 60°F to 450°F. TFE v-ring packing is not suitable for service below 60°F.

EPDM LIP

EPDM lip packing is commonly used for water packing. EPDM lip packing is good from -20°F to 450°F. EPDM lip packing is not suitable for fluids containing or contaminated with oil. For applications from 32°F to -20°F when condensation on the stem can turn to ice (consult factory) an optional stem heater is also recommended.

GRAPHITE

Graphite packing is our most durable packing material choice. Graphite packing is good from -20°F to 800°F and is required for temperatures above 450°F to the valve's limit of 800°F. For applications from 32°F to -20°F when condensation on the stem can turn to ice (consult factory) an optional stem heater is also recommended.

VACUUM SERVICE

Vacuum service packing is teflon v-ring packing that is designed for use when the pressure inside the valve is lower than the atmospheric pressure outside the valve. Like teflon v-ring packing, vacuum service packing is good from 60°F to 450°F. Vacuum service packing is not suitable for service below 60°F.

BONNET CONSTRUCTION**PEEK BEARINGS**

Bonnet constructions using PEEK Bearings are our most common and lowest cost choices for water and chemical applications. PEEK bearings are good to 450°F. PEEK Bearings are used with EPDM lip, teflon v-ring, graphite, or vacuum service packing.

Z PEEK BEARINGS

Bonnet constructions using Z PEEK Bearings are our most common and lowest cost choices for steam applications. Z PEEK bearings are good for temperatures up to 450°F. Z PEEK bearings are used with EPDM lip, teflon v-ring, graphite, or vacuum service packing.

GRAPHALLOY BEARINGS WITH EXTENSION BONNET

Bonnet constructions using Graphalloy bearings with an extension bonnet are the preferred choice for applications greater than 450°F. Three kinds of Graphalloy bearings are available. Copper based Graphalloy bearings are good from -20°F to 750°F for non-oxidizing media ONLY and are best suited for hot water and steam. Nickel based Graphalloy bearings are good from -20°F to 750°F for non-oxidizing media ONLY and are best suited for heat transfer oils. Oxidation resistant Graphalloy bearings are good from -20°F to 800°F for oxidizing media. Bonnet constructions using Graphalloy bearings with an extension bonnet are used with graphite packing and graphite gaskets. This construction is commonly selected for higher temperature applications where it is necessary to have space between the actuator and valve.

Rectangular Tank Capacity in Gallons

$$\text{Gallons} = \frac{\text{Height} \times \text{Width} \times \text{Length (inches)}}{230}$$

or

$$\text{Gallons} = H \times W \times L \text{ (Ft.)} \times 7.5$$

Circular Tank Storage Capacity in Gallons

$$\text{Storage} = 6D^2 \times L \text{ (Gallons)}$$

Where:

D = Tank Diameter in Feet
L = Length in Feet

LOAD SIZING CALCULATIONS

Glossary of Terms

t = Time in Hours
Cp = Specific Heat of Liquid
S = Specific Gravity of Fluid
W = Weight in Lbs.
ΔT = Temperature Rise or Fall in °F
h_{fg} = Latent Heat of Steam

Conversion Factors

1 Lb. Steam / Hr. = 1000 BTU / Hr.
1 Cubic Meter = 264 U.S. Gallons
1 Cubic Foot Water = 62.4 Lbs.
1 PSI = 2.04 Inches of Mercury
1 PSI = 2.3 Feet of Water
1 PSI = 27.7 Inches of Water
1 U.S. Gallon Water = 231 Cubic Inches
1 U.S. Gallon Water = 8.33 Lbs.

Heating Water with Steam

Quick Method

$$\text{Lbs./Hr.} = \frac{\text{GPM}}{2} \times \Delta T$$

Accurate Method

$$\text{Lbs./Hr.} = \frac{\text{GPM} \times 500 \times \Delta T}{h_{fg}}$$

Heating or Cooling Water with Water

$$\text{GPM}_1 = \text{GPM}_2 \times \frac{\text{°F water}_2 \text{ temp. rise or drop}}{\text{°F water}_1 \text{ temp. rise or drop}}$$

Heating or Cooling Water

$$\text{GPM} = \frac{\text{BTU / Hr.}}{(\text{°F water temp. rise or drop}) \times 500}$$

Heating Oil with Steam

$$\text{Lbs./Hr.} = \frac{\text{GPM}}{4} \times (\text{°F oil temp. rise})$$

Heating Air with Water

$$\text{GPM} = 2.16 \times \frac{\text{CFM} \times (\text{°F air temp. rise})}{1000 \times (\text{°F water temp. drop})}$$

Heating Liquids with Steam

$$\text{Lbs./Hr.} = \frac{\text{GPM} \times 60 \times \text{Cp} \times W}{h_{fg}} \times \Delta T$$

Heating Liquids in Steam Jacketed Kettles

$$\text{Lbs./Hr.} = \frac{\text{Gallons} \times \text{Cp} \times S \times 8.33}{h_{fg} \times t} \times \Delta T$$

General Liquid Heating

$$\text{Lbs./Hr.} = \frac{W \times \text{Cp}}{h_{fg} \times t} \times \Delta T$$

Heating Air with Steam

$$\text{Lbs./Hr.} = \frac{\text{CFM}}{900} \times \Delta T$$

NOTES:

- 5840 leakage ratings are ANSI Class IV (Stainless Steel or Alloy 6 Trim), ANSI Class VI (TFE or PEEK Trim.) Warren Class IV+ leakage rating is available for Stainless Steel or Alloy 6 Trim for less leakage than ANSI Class IV. (See Allowable Seat Leakage Classes table on page 7).
- Inlet pressure **cannot** exceed Body Pressure-Temperature Rating.
- The 3-15 and 1-17 ranges apply to valves with diaphragm actuators and control signals coming directly from I/P transducers with matching ranges. The 0-30 and 0-40 ranges apply to valves with diaphragm actuators and a positioner or an I/P transducer of suitable range. The 0-60, 0-80, 0-100, and 0-120 ranges apply to valves with cylinder actuators and a positioner.
- N/A indicates that the air signal is not capable of providing any shut-off or it exceeds the actuator's maximum air pressure.

Maximum air pressure
DL84 & 84XR...30PSIG

- See Actuators, Positioners, and Accessories section for explanation of spring ranges.

Range 4	0-40	0-120

Fluid Temperature Limit Thresholds

The engineering data within our product specification will share information about MAX fluid temperature limits as if it is an absolute for any configurable valve assembly. It is not. The MAX fluid temperatures listed, sometimes as high as 800 Deg. F depending on the valve is only an absolute one for the valve body itself. It does not take into consideration the actuation or accessories. Actuators and accessories each have their own MAX ambient temperature limits that may be anywhere from 122 °F to 250°F depending on the items for the electronics or softs goods these items contain. ***It is nearly impossible to correlate JUST fluid temperature to determine when any of these actuators or accessories will have their ambient exceeded.***

THERE ARE SEVERAL FACTORS THAT INCLUDE BUT ARE NOT LIMITED TO:

- valve size
- actuator orientation
- room ambient temperature
- distance from the valve body to the components of interest
- bonnet style/size
- conducted heat versus radiated heat
- ventilation

With all of these variables it is a challenge to come up with some guidelines.

However, we have attempted to do that in the tables that follow on page 31. Realize these are only guidelines.

Actuator Mounting **VS.** Insulating Blankets

When working with higher fluid temperatures thermal insulating blankets can ***dramatically reduce surface temperatures on pipes, valves and other fixtures*** in a fluid control system such that the ambient room temperatures in these environments are dramatically reduced as well. This is often required in for valve actuators and accessories to reliably survive when fluid temperatures rise well above the safe ambient temperatures of the devices. Radiant heat and convected heat are the major sources for damage to these actuators and accessories. When a valve actuator is mounted to the side of a valve there is still radiant heat but convected heat is mostly eliminated. ***For globe control valves, having the actuator mounted vertically above the valve is best for optimum valve packing life but will then suffer the most with both radiant and convected heat to deal with.*** Alternatives to blankets and the mounting orientation listed include longer yoke actuators and extension bonnets on valves. These put distance between the heat sources and the components you are trying to protect from heat.

Choose the right blanket

ACOUSTIGUARD™

vs.

THERMIGUARD™

At Warren Controls our **AcoustiGuard™ & ThermiGuard™** blankets are nearly identical. In fact they have identical thermal properties. The **AcoustiGuard™** has an additional layer of high density barium sulfate vinyl reflector for sound reflection. Each blanket is specifically designed in a one or two piece design that is made to be easily removable for valve servicing. When used in conjunction with high temperature fluids, significant energy savings, lower surface & ambient temperatures and **a safer environment for employees are just some of the benefits.**

Predicting Safe Fluid Temperatures for Actuators & Accessories

VERTICAL ABOVE PIPING

This is the recommended position for mounting as it is the best position to ensure the service life of the equipment; however this is where it will encounter the most heat and sound vibrations.

45° FROM VERTICAL ABOVE PIPING ON EITHER SIDE

You may mount in this position to try to reduce the heat in high temperature applications; however this will reduce the life of the packing.

*Actuators mounted in any position other than vertical **MUST** be supported independent of the valve.*

90° TO PIPING HORIZONTAL ON EITHER SIDE

This is the worst possible position and creates great strain and limits the life of the internal components of the valve.

*Actuators mounted in any position other than vertical **MUST** be supported independent of the valve.*

The tables that follow on page 31 will identify temperature ranges, valve size ranges, actuator orientation and use of thermal blankets to determine what is required to get longevity out of your actuators and accessories.

Whether you need to lower your mechanical room temperature, avoid getting burned, reduce harmful noise or save energy our blanket wraps are your solution!

AcoustiGuard™ & ThermiGuard™ are custom fit high quality insulation blanket systems pre-engineered to either reduce harmful noise, or save energy by retaining radiant heat. Both are designed to improve the surrounding work environment. While **AcoustiGuard™** is designed to act as a “sound attenuation” and thermal barrier, **ThermiGuard™** is capable of withstanding weather conditions and chemical environments. Both are capable of withstanding maximum service temperatures of 450°F (**AcoustiGuard™ & ThermiGuard™**) or up to 800°F with the High Temperature option. Any piece will not exceed 40 pounds. **AcoustiGuard™** comes with 2 fastening options: Lacing Pins & Metal “D” Ring Strap with Velcro Tab. In addition to these fastening options, **ThermiGuard™** comes with 2 additional fastening options: Velcro Flaps & Side Release Buckles. The **AcoustiGuard™ & ThermiGuard™** products are designed to be flexible and easier to install, easy to remove and reinstall, allowing quick access and easy equipment serviceability.

- **EASY TO INSTALL & REINSTALL**
- **CAN WITHSTAND UP TO 450°F OR 800°F**
- **MULTIPLE FASTENING OPTIONS**

Note: The spring range of XR (eXtended Range) actuators varies with travel. These actuators require positioners or I/P's for modulating control

Effective Area:	DL49, 49XR (49 Sq In), DL84 & 84XR (84 Sq In) DL115 & 115XR (115 Sq In)
Springs:	DL49, 49XR, 84 & 84XR Multiple DL115 Single DL115XR Dual
Max Air Supply:	DL49, 49XR, 84 & 84XR 30PSIG DL115 & 115XR 40PSIG
Air Connections:	1/4 NPT
Diaphragm:	Buna-N Fabric Reinforced
Diaphragm Chambers:	Steel
Yoke:	DL49, 49XR, 84, 84XR, DL115 & 115XR Ductile Iron
Stem:	300 Series Stainless Steel
Finish:	DL49, 49XR Epoxy-Coated DL84, 84XR, 115, & 115XR Acrylic Enamel
Ambient Temperature:	DL49, 49XR -20 to 160°F DL84, 84XR, 115 & 115XR -40 to 180°F
Mounting:	Vertical Above or Below Valve
Handwheel:	Available on DL49, 49XR, 84, 84XR, 115 & 115XR

CYLINDER ACTUATORS

Piston Diameter:	4, 6, & 8 Inch
Springs:	Single
Max Air Supply:	120PSIG
Air Connections:	1/4 NPT
Piston:	Aluminum
Cylinder:	Aluminum
Heads:	Aluminum, Black Anodized
Yoke:	Steel, Acrylic Painted
Stem:	416 Series Stainless Steel, Hard Chromate Plated
Ambient Temperature:	-25 to 250°F
Mounting:	Vertical Above or Below Valve

Note: Cylinder Actuators require a positioner for modulating control.

POSITIONERS

Split Ranging with Positioners

Positioners are sometimes used to "Split-Range" two control valves in a parallel configuration within a piping scheme. This technique is used to obtain higher rangeability than could otherwise be achieved with a single control valve. Typically one smaller valve supplying 15% to 35% of total flow is mated with a larger valve supplying 65% to 85% of total flow.

The best-matched pair will each be providing similar rangeability for each respective flow contribution to the manifold. Calculated as maximum flow /minimum controllable flow, the smaller valve should not be attempting to control flow below 5% of stroke. Estimate Cv from Cv tables vs.. stroke to calculate this.

The chosen positioners would then have a Low Range signal for the smaller valve and a High Range Signal for the larger valve. With this, a single control signal can be sequentially applied to each valve. At mid-signal range, the little valve is completely open while the larger valve is just starting to open. Controlability for wide process set point ranges is dramatically improved.

VAC V200 Models:

VAC V200 Pneumatic

Models:	2FP_: Full Range Signal (3-15 PSIG) 2LP_: Low Range Signal (3-9 PSIG) 2HP_: High Range Signal (9-15 PSIG)
Options:	2SPDT Limit Switches, 4-20 mA Feedback
Ingress & Corrosion	
Protection:	NEMA, 4X, IP66
Supply Pressure:	20 to 145 PSIG Max Not to Exceed
Actuator Rating	
Linearity error:	<0.7% f.s.
Hysteresis:	<0.4% f.s.
Repeatability:	<0.3% f.s.
Weight:	3.2 lbs

VAC V200 Electro-Pneumatic

Models:	2FE_: Full Range Signal (4-20 mA) 2LE_: Low Range Signal (4-12 mA) 2HE_: High Range Signal (12-20 mA)
Options:	2SPDT Limit Switches, 4-20 mA Feedback
Ingress & Corrosion	
Protection:	NEMA, 4X, IP66
Supply Pressure:	20 to 145 PSIG Not to Exceed Actuator Rating
Linearity error:	<1.0% f.s.
Hysteresis:	<0.6% f.s.
Repeatability:	<0.5% f.s.
Weight:	3.8 lbs

VAC V200 Electro-Pneumatic Intrinsically Safe

Models:	2FL_: Full Range Signal (4-20 mA) 2LL_: Low Range Signal (4-12 mA) 2HL_: High Range Signal (12-20 mA)
Ingress & Corrosion	
Protection:	NEMA, 4X, IP66
Supply Pressure:	20 to 145 PSIG Not to Exceed Actuator Rating
Linearity error:	<1.0% f.s.
Hysteresis:	<0.6% f.s.
Repeatability:	<0.5% f.s.
Weight:	3.8 lbs

VAC V200 Electro-Pneumatic Explosion Proof

Models:	2FX_: Full Range Signal (4-20 mA) 2LX_: Low Range Signal (4-12 mA) 2HX_: High Range Signal (12-20 mA)
Ingress & Corrosion	
Protection:	NEMA, 4X, IP66
Supply Pressure:	20 to 145 PSIG Not to Exceed Actuator Rating
Linearity error:	<0.8% f.s.
Hysteresis:	<0.5% f.s.
Repeatability:	<0.4% f.s.
Weight:	5.3 lbs

VAC V200 Electro-Pneumatic Fail Freeze *

Models: 2FF_: Full Range Signal (4-20 mA)
2LF_: Low Range Signal (4-12 mA)
2HF_: High Range Signal (12-20 mA)

Options: 2SPDT Limit Switches, 4-20 mA Feedback

Ingress & Corrosion

Protection: NEMA, 4X, IP66

Supply Pressure: 20 to 100 PSIG **Not to Exceed Actuator Rating**

Linearity error: <1.2% f.s.

Hysteresis: <0.9% f.s.

Repeatability: <0.8% f.s.

Weight: 5.4 lbs

VAC All Models:

Media: Clean Dry Oil Free Air acc.to DIN / ISO 8573-1
Pollution and Oil Content According to Class 3 (Purity: Max. Particle Size: 5 µm, Max. Particle Density: 5 mg / m3; Oil Content: Max. Concentration: 1mg / m3; Pressure Dew Point: 10, K Below Operating Temperature

Output Flow Capacity: 2.3 SCFM at 20 PSIG,
6.0 SCFM at 90 PSIG

Air Consumption: <0.015 SCFM (Independent of Supply Pressure)

Air Connections: 1/4-18 NPT

Electrical Connections: 1/2-14 NPT

Gauges: Supply, Output

Ambient Temperature: -40 to 185°F

Mounting: Yoke Mounted

Available as Specials: **(Contact Factory for Details and Available Models)**

Fail Freeze Function

Safety Integrity Level SIL2

ATEX, GOST, IECEx Approvals

Shutdown Module

OPTIONS:

F) 4-20 mA Feedback Module

Range 4-20mA (Configurable) Two-Wire circuitry, Power Supply 24VDC

NOTE: For 4-20mA w/HART Models ONLY

K) Digital Position Feedback Module

Two Switches For Digital Position Feedback (Position Adjustable Within The Range Of 0 ... 100%, Ranges Cannot Overlap)

NOTE: For 4-20mA w/HART Models ONLY

L) 24VDC/AC Micro-switches

Two Micro-switches For Independent Position Signaling. Switching Points Adjustable Between 0 ... 100%

NOTE: For Explosion-Proof Models ONLY

P) Proximity Switches NC

Two Proximity Switches For Independent Position Signaling. Switching Points Adjustable Between 0 ... 100%
Switch Type SJ2-SN (NC)

ACCEPTABLE OPTION COMBINATIONS				
w/	F*	K*	L†	P
F*		Yes	Yes	Yes
K*	Yes		Yes	Yes
L†	Yes	Yes		No
P	Yes	Yes	No	

* For 4-20mA w/HART Models Only

POSITION INDICATION SWITCHES

Proximity Mark 1

Models:

PX11: 2 SPDT Switches

Ambient Temperature: -58 to 176°F Continuous (Rated to 350°F for 600 hours)

PX12: 2 SPDT Switches w/ 2K Potentiometer

Ambient Temperature: -40 to 176°F

Power Rating: 1.5 Watt Maximum

PX13: 2 SPDT Switches w/ 4-20 mA Feedback w/2K OHM Pot

Ambient Temperature: -40 to 176°F

Power Requirement: 5 to 30 Vdc

Current Consumption: 50 mA

PX14: 4 SPDT Switches

Ambient Temperature: -58 to 176°F Continuous (Rated to 350°F for 600 hours)

PX15: 6 SPDT Switches

Ambient Temperature: -58 to 176°F Continuous (Rated to 350°F for 600 hours)

PX16: 4-20mA Transmitter, 2K OHM Pot, No Switches

Ambient Temperature: -40°F to 176°F

Power Requirements: 5 to 30 Vdc

Current Consumption: 50mA

All Models:

Locations: NEMA 1, 2, 3, 3R, 3S, 4, 4X, 6, 7, 9, 12, 13

Approvals: & Ratings:

UL: Class I, Div. 1 & 2, Groups B, C, D; Class II, Div. 1 & 2, Groups E, F, & G

CSA: Class I, Div. 1 & 2, Groups A, B, C, D; Class II, Div. 1 & 2, Groups E, F, & G

Construction: Aluminum Housing, Hard Anodized

Electrical Connection: Screw Terminal

Conduit Connection: 3/4 NPT

Mounting: Yoke Mounted

I/P's

Type 500X

Locations: NEMA 4X (IP65)
 Construction: Zinc Alloy Base with Aluminum Bonnet, Epoxy Painted
 Ranges: 3-9, 9-15, 3-15, 1-17, or 6-30 PSI
 Supply Pressure: Minimum 3 PSIG Above Maximum Output
 Maximum 100 PSIG
Not to Exceed Actuator Rating
 Flow Capacity: 4.5 SCFM at 25 PSIG, 12 SCFM at 100 PSIG
 Air Consumption: 0.05 SCFM Midrange Typical
 Ambient Temperature: -20 to 140°F

Type 550X

Locations: NEMA 4X (IP65)
 Construction: Chromate-treated Aluminum with Epoxy Paint
 Ranges: 0-30, or 0-60 PSI
 Supply Pressure: Minimum 5 PSIG Above Maximum Output
 Maximum 100 PSIG
Not to Exceed Actuator Rating
 Flow Capacity: 12 SCFM at 100 PSIG
 Air Consumption: 6.0 SCFH Midrange Typical
 Ambient Temperature: -20 to 150°F

Type 950X

Locations: NEMA 4X (IP65), Explosion proof
 Construction: Chromate-treated Aluminum with Epoxy Paint
 Ranges: 3-15 PSI
 Supply Pressure: Minimum 5 PSIG Above Maximum Output
 Maximum 100 PSIG
Not to Exceed Actuator Rating
 Flow Capacity: 4.5 SCFM at 25 PSIG
 Air Consumption: 3.0 SCFH Midrange Typical.
 Ambient Temperature: -40 to 160°F

I/P's All Models:

Input: 4-20 mA
 Field Reversible
 Air Connections: 1/4 NPT
 Electrical Connection: 1/2 NPT, Pigtail Leads
 Media: Clean Dry Oil Free Air Filtered to 40 micron
 Mounting: Yoke Mounted

AIR FILTER REGULATORS

Models: Type 300, Type 350SS
 Output Ranges: Type 300, 0-30, 0-60, or 0-120 PSIG
 Type 350SS, 0-100 PSIG
 Supply Pressure: Type 300, 250 PSIG Maximum
 Type 350SS, 290 PSIG Maximum
 Construction: Type 300, Die-Cast Aluminum with Irridite
 and Baked Epoxy Paint
 Type 350SS, 316 Stainless Steel
 Gauge: Type 300, Output, Housing Steel Painted
 Type 350SS, Output, Housing Stainless Steel
 Air Connections: 1/4 NPT
 Filter: Type 300, 5 micron
 (D400 Positioners Require 5 micron Filter).
 Type 350SS, 25 micron
 Mounting: Chamber Mounted (Diagram Actuator)
 Remote Mounted (Cylinder Actuator)

SOLENOIDS

Models: For use with Diaphragm Actuators or Positioners with Cylinder Actuators
 8320G184, EF8320G184, 8320G202, EF8320G202
For use with Cylinder Actuators without Positioners
 8342G1, EF8342G1, 8342G701, EF8342G701
 Construction: (EF)8320G184, 3-Way Brass
 (EF)8320G202, 3-Way Stainless Steel
 (EF)8342G1, 4-Way Brass
 (EF)8342G701, 4-Way Stainless Steel
 Locations: 8320G184, 8320G202, 8342G1, & 8342G701
 Watertight, Types 1, 2, 3, 3S, 4, and 4X
 EF8320G184, EF8320G202, EF8342G1 & EF8342G701 Explosion proof and Watertight,
 Types 3, 3S, 4, 4X 6, 6P, 7 & 9
 Supply: 120VAC (All), 24Vdc (8320G184)
 Ambient Temperature: +32 to 125°F
 Air Connections: 1/4 NPT
 Electrical Connection: 1/2 NPT, Pigtail Leads
 Approvals: CSA, UL, CE
 Mounting: Chamber Mounted

AIR TUBING

Standard: Copper
 Optional: Stainless Steel

CONFIGURATIONS

								GG Graphite Packing and Gaskets, Copper Based Graphalloy Bearings, Extension Bonnet	
								GL Graphite Packing and Gaskets, Nickel Based Graphalloy Bearings, Extension Bonnet	
								G7 Graphite Packing and Gaskets, Oxidation Resis- tant Graphalloy Bearings, Extension Bonnet	

APPLICATION SELECTION TIPS

PACKING

- Use Teflon for most fluids below 450°F except water.
- Use EPDM Packing for water service only. Do not use on oils, hydrocarbons and acids.
- Use Graphite Packing for fluids above 450°F.

BONNET CONSTRUCTION

- Use PEEK Bearings for most applications below 450°F that are not steam.
- Use Z PEEK for steam applications below 450°F.
- Use Graphalloy Bearings w/ext. bonnet above 450°F. See page 9 for further selection criteria on Graphalloy Type.

ACID SERVICE

For Acid Service, special rulon bearings are required. Consult Factory.

VALVE TYPE/TRIM MATERIAL COMBINATIONS:

TRIM MATERIAL

C3 8" Spring Fail	For 58H40 Only

* Available with Split Ranges, Select "S" in Special Options

‡ For positioner code 2xF, the VAC V200 Positioner with the Fail Freeze module, check first with the factory for approval due to space considerations on certain valve assembly combinations.

Note:

Standard pneumatic tubing is copper. SS tubing "T" is optional.

SS tagging "G" (Two lines, 24 characters/line) is optional.

SS tubing and tagging together "B" is optional.

Warren Controls does not assume responsibility for the selection, use, or maintenance of any product. Responsibility for proper selection, use, and maintenance of any Warren Controls product remains solely with the purchaser and end-user.

POSITIONERS									
Valve Type	Actuator Action	Input Signal					Failure Modes		
		Pneumatic	Electro-Pneumatic	PROFIBUS PA	Foundation Fieldbus	Increasing Signal	Loss of Signal Valve Fails... ¹	Loss of Power Valve Fails... ²	Loss of Air Supply Valve Fails...
5840, 43 & 48	Direct	3-15 PSI	4-20 mA	PROFIBUS Protocol	Fieldbus Protocol	Closes Valve	Open	Open	Open
	Reverse	3-15 PSI	4-20 mA	PROFIBUS Protocol	Fieldbus Protocol	Opens Valve	Closed	Closed	Closed

¹ Valves with Fail Freeze Positioners Fail in Last Position on Loss of Signal.

² PROFIBUS PA or Foundation Fieldbus ONLY

POSITIONER FEEDBACK			
Valve Type	Actuator Action	Feedback Signal ³	Signal Increases as
5840, 43 & 48	Direct	4-20 mA	Valve Closes
	Reverse	4-20 mA	Valve Opens

³ Reduced feedback span for valves with 760 and less than 1 inch travel.

POSITIONER LIMIT SWITCHES			
Valve Type	Position	Settings	
		Switch 1	Switch 2
5840, 43 & 48	Valve Closed	Closed	Open
	Valve Open	Open	Closed

I/P'S

AIR FILTER REGULATORS	
Actuator	Output Pressure
DL49, 49XR, 84 & 84XR	30PSIG
DL115 & 115XR	40PSIG
4", 6" & 8" Cylinder	100PSIG

If the Solenoid is used with a Positioner or an I/P, refer to the Positioner or I/P listings for factory default settings and failure modes with the solenoid not failed.

PROXIMITY MARK 1 POSITION INDICATION SWITCHES FEEDBACK				
Valve Type	Actuator Action	Feedback Signal		Feedback Signal Increases as
		Potentiometer ⁴	mA	
5840, 43 & 48	Direct	0-350 ohm	4-20 mA	Valve Closes
	Reverse	0-350 ohm	4-20 mA	Valve Opens

⁴Span varies from approx 155 to 350 ohm depending on actuator and travel.

LIMIT SWITCHES			
Valve Type	Position	Settings	
		Switch 1, 3, 5	Switch 2, 4, 6
5840, 43 & 48	Valve Closed	Closed	Open
	Valve Open	Open	Closed
